

# JOCEL DELOS SANTOS

Malvar, Batangas, Philippines | joceldelossantos@gmail.com | +63 912 345 6789  
Portfolio: jocelds.github.io | GitHub: github.com/JocelDS | LinkedIn: linkedin.com/in/jocelds

## PROFESSIONAL SUMMARY

Detail-oriented Information Technology student specializing in Business Analytics at Batangas State University with background in full-stack web, mobile application, and database development. Experienced in building responsive web systems and cross-platform applications using modern programming languages and frameworks. Combines strong analytical reasoning and data management skills with practical software engineering techniques to solve real-world operational challenges. Seeking an entry-level Software Developer, Junior Software Engineer, or Business Analyst role to contribute to software design, system optimization, and data-driven decision-making.

## TECHNICAL SKILLS

|                               |                                                     |
|-------------------------------|-----------------------------------------------------|
| <b>Programming:</b>           | C++, Java, PHP, JavaScript, Python, R               |
| <b>Web Development:</b>       | HTML, CSS, JavaScript, React, Tailwind CSS, Node.js |
| <b>Mobile Development:</b>    | Flutter, Dart, Firebase                             |
| <b>Database:</b>              | MySQL, Cloud Firestore                              |
| <b>Tools &amp; Platforms:</b> | Git, GitHub, VS Code                                |

## PROJECTS

**TriConnect — Smart Tricycle Booking System** | *Flutter, Dart, Firebase* [github.com/JocelDS/triconnect](https://github.com/JocelDS/triconnect)

A mobile platform designed to streamline local transportation fare computation and ride matching.

- Developed real-time location and booking workflows using Flutter and Cloud Firestore to facilitate efficient driver-passenger communication.
- Implemented dynamic distance and fare calculation algorithms to improve price transparency and operational tracking.

**The Cyber Cafe 1025 — Cyber Cafe Management System** | *PHP, MySQL, HTML/CSS, JavaScript* [github.com/JocelDS/cyber-cafe-1025](https://github.com/JocelDS/cyber-cafe-1025)

A web-based administration tool for monitoring computer terminal sessions, user registrations, and revenue.

- Engineered terminal status tracking and customer account management modules backed by a relational MySQL database structure.
- Designed automated income aggregation and session log reporting features to streamline daily administrative oversight.

**Baked by the Crater — Bakery Ordering System** | *PHP, MySQL, HTML/CSS, XML integration* [github.com/JocelDS/baked-by-the-crater](https://github.com/JocelDS/baked-by-the-crater)

An interactive e-commerce platform tailored for custom bakery product displays and online order tracking.

- Built an intuitive product landing and order checkout pipeline integrated with structured XML data formats for configuration.
- Created secure admin management utilities to process customer orders, update catalog items, and generate sales summaries.

**Bat Cave Cafe — Cafe Ordering and Reservation System** | *PHP, MySQL, HTML/CSS, JavaScript* [github.com/JocelDS/bat-cave-cafe](https://github.com/JocelDS/bat-cave-cafe)

An integrated web system for food item ordering, table reservations, and room booking management.

- Implemented customer reservation and menu selection modules with real-time slot availability verification.
- Structured backend database tables and query logic to ensure data consistency across multiple transaction types.

**Click n' Cart — Online Grocery Shopping and Delivery System** | *React, Node.js, MySQL* [github.com/JocelDS/click-n-cart](https://github.com/JocelDS/click-n-cart)

A full-stack e-commerce web application facilitating grocery browsing, digital cart management, and order fulfillment.

- Architected modular React frontend components paired with Node.js RESTful API endpoints for seamless inventory browsing.
- Integrated shopping cart state persistence and checkout processing flows to streamline online grocery ordering.

**JEM Car Rental System — Vehicle Rental Management System** | *Java, MySQL* [github.com/JocelDS/jem-car-rental](https://github.com/JocelDS/jem-car-rental)

A desktop software application for managing fleet availability, customer bookings, and rental invoicing.

- Designed object-oriented Java modules to manage vehicle inventory states, customer contracts, and billing records.
- Developed robust database constraints and input validation logic to prevent double-booking and data inconsistencies.

## CERTIFICATIONS

- **BITCON 2025** — Building IT Capabilities and Educational Innovation Conference
- **Databiz 2024** — Data Analytics and Business Intelligence Summit

## EDUCATION

**Batangas State University – The National Engineering University**  
*Bachelor of Science in Information Technology — Business Analytics Track*  
JLPC Malvar Campus

Expected Graduation: 2028
